Full-stack developer specializing in React, Node.js, Express.js, and FastAPI with hands-on experience building AI-powered applications using machine learning and LLM integration. Experienced in designing scalable REST APIs, recommendation systems, OCR pipelines, and secure end-to-end web applications.

Skills

Front-End: HTML, CSS, JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, PowerBI

Version Control: Git, GitHub

Back-End: Node.js, Express.js, FastAPI, REST API, Docker

Programming: C/C++, Python, Java, IoT

Database: SQL, MongoDB, Supabase

Tools: VS Code, Postman

Experience

IIPS - Summer Internship (May 2025 – July 2025)

Full Stack Developer

IIPS Academics

- Built a comprehensive academic management web platform for faculty and students using React, Tailwind CSS, and Supabase.
- Designed responsive UI components ensuring seamless access across devices.
- Integrated Supabase for authentication, resource management, and database operations.
- Implemented role-based authentication (Student/Teacher/Admin).
- Collaborated with the team to develop features for course tracking, resource sharing, and progress visualization.
- **GitHub:** [IIPS_Academics.2.0](#)

Education

International Institute of Professional Studies, DAVV Indore

2022–2027

Integrated B.Tech + M.Tech in Information Technology — CGPA: 9.1

The New Era Public School

2021–2022

Class XII – 85%

Shri Cloth Market Vaishnav Bal Mandir Girls H.S. School, Indore

2019–2020

Class X – 83%

Certifications

AI & Machine Learning Specialization • Postman API Fundamentals Student Expert • IoT Based Product Development (Avinya 2024)

Projects

AutoGrader – AI-Powered Exam Evaluation System

- Automated exam grading end-to-end with FastAPI + Supabase — built a multi-engine OCR pipeline for handwritten answer extraction and a semantic-similarity grading engine (sentence-transformers), processed asynchronously in the background, with role-based auth and teacher-reviewable AI grades.
- Built a handwriting-recognition pipeline that cleans and preprocesses scanned answer sheets (line removal, lighting normalization, 4 contrast/threshold/sharpening variants) and automatically selects the highest-confidence result across multiple OCR engines (PaddleOCR, Tesseract, EasyOCR). **GitHub:** <https://github.com/shivi028/Autograder>

FlexiRecharge AI — AI-Powered Telecom Recharge Recommendation Platform — React • Express.js • FastAPI • Scikit-learn • Razorpay

- Developed an AI-powered telecom recharge recommendation platform using React, Express.js, and FastAPI that converts natural language prompts into personalized recharge plans through AI and machine learning.
- Built a Random Forest-based pricing engine and recommendation system to predict recharge costs, suggest cost-saving alternatives, and integrated Razorpay for secure end-to-end payment processing. **GitHub:** <https://github.com/shivi028/FlexiRecharge-AI> **Live Demo:**

Placement Prep AI — React.js • Node.js • Express.js • Gemini AI • Docker • Docker Compose

- Built an AI-powered interview preparation platform that generates unique interview questions based on the selected role and technology stack using Gemini AI.
- Containerized the frontend and backend with Docker and orchestrated multi-container deployment using Docker Compose for consistent development and deployment environments. **GitHub:** <https://github.com/shivi028/Placement-Prep-AI> **Live Demo:** <http://placement-prep-ai-git-main-shivi028s-projects.vercel.app/>

Retail Sales Analytics Dashboard — SQL • Python • Pandas • Power BI

- Built an end-to-end retail analytics solution on 9,994 sales records using SQL, Python, and Power BI, performing profitability, customer, and regional analysis through interactive dashboards. Identified key business insights including Texas as the highest loss-making state (-25.7K), Technology as the most profitable category (145K), and Tables as the primary driver of Furniture losses. **GitHub:** <https://github.com/shivi028/Retail-Sales-Analytics>
